PROJECT

Event Ticketing Management System
Laravel, React.js, PostgreSQL, Midtrans API
Developed a complete web-based event ticketing platform for event organizers and attendees.

- Developed RESTful APIs using Laravel for event, ticket, and transaction management.
- Implemented authentication and authorization using Laravel Sanctum.
- Integrated Midtrans Payment Gateway for secure online transactions.
- Used Axios for API communication between Laravel backend and React frontend.
- Implemented React Router for client-side navigation.
- Generated automatic event tickets with unique barcode.
- Developed attendee check-in system using barcode scanning.
- Built admin dashboard for event, transaction, and participant management.
- Implemented Excel export functionality for attendance and transaction reports.
- Deployed application on Linux server using Nginx.

Custom Business Dashboard
Laravel, React.js, PostgreSQL
Developed administrative dashboard systems for internal business operations.

- Data management modules.
- Reporting features.
- Role-based access control.
- Database optimization.

Responsive Landing Page Development
React.js
Developed modern and responsive landing pages for business promotion and lead generation.

- Mobile-first responsive design.
- SEO-friendly page structure.
- Optimized page performance and loading speed.
- CTA-focused user experience implementation.

Company Profile Website Development
Wordpress, Elementor
Built and customized company profile websites for clients.

- Responsive company profile pages.
- SEO optimization.
- Custom front-end modifications.
- Performance optimization.

WORK EXPERIENCE

PT Sanken Argadwijaya **North Jakarta, Indonesia**
Web Developer / Full-Stack Developer Intern *Sep 2026 – present*

- Developed a backend system for an ESP32-based project to record and monitor active machines in the factory.
- Built RESTful API endpoints using Laravel and PHP to receive data from and send commands to ESP32 devices.
- Managed data acquisition logic to ensure machine activity data was captured, validated, and stored reliably.
- Designed and managed MySQL database structures for machine logs and operational records using SQLyog.
- Collaborated on integrating ESP32 hardware with the web backend to support production monitoring.

Self-Employed/ Freelance **Yogyakarta, Indonesia**
Full-Stack Developer *June 2021 – present*

- Delivered multiple freelance web development projects for SMEs, organizations, and individual clients.
- Developed web applications using Laravel, React, JavaScript, PHP, and PostgreSQL / MySQL.
- Built event management systems, company profile websites, landing pages, and administrative dashboards.
- Designed UI/UX prototypes using Figma before development.
- Managed complete project lifecycle from requirement gathering to deployment.
- Maintained 100% project delivery completion rate.

PT Cakrawala Inovasi Indonesia **Jakarta, Indonesia**
Freelance Web Developer *May 2025*

- Build a WordPress company profile website using Elementor and custom front-end code.
- Improved website loading performance by 35% through code optimization.
